

“HOW TO FIT A SWING TOP CAP”

1 Firstly place your stopper on a flat surface (as shown right). This is just to make sure you have the stopper the right way to start with.

✓ **Right way**

✗ **Wrong way**

2 Grab your swing top bottle and place together with the correctly placed stopper (As shown right) The seal arch should point in the air.

3 Next pick the stopper directly up and place the ceramic stopper into the bottle. Connect one of the longer seal arch arms into the ready made hole in the swing bottle itself.

4 Connect the remaining seal arch arm into the hole opposite. (As shown right)
Please note: Due to the tight fitting purpose of the swing stopper, this is quite tough to do, but is easier if you slide the attached arm downwards into the hole.

5 Once the stopper and arms are correctly in place. Apply slight pressure to the seal arch, and you're done!

Please Note: Ensure you grip the bottle with two hands before applying pressure to the seal arch. (Just helps to ensure stability).
